Datacard ID Works Basic Edition Identification Software

Base offering from the leading ID software family

Datacard® ID Works® Basic Edition identification software extends all the benefits of the industry's most powerful, flexible, easy-to-use software family to your start-up ID program.

Basic Edition software provides the core set of tools for creating card designs, report designs, production forms and databases, entering and retrieving data, capturing images and sending jobs to printers. Plus, when your needs change, you can upgrade to more advanced ID Works packages quickly, easily and affordably.

Robust features and customization capabilities

ID Works Basic Edition software lets you create card and report designs, enter and retrieve data from Microsoft® Access databases and encode magnetic stripes and bar codes. The software also gives you flexibility to create your own layout, field labels, color and graphics within production forms.

Integrates with a range of printers and image capture devices

We enhanced Basic Edition to leverage the advanced features of any card printer in the Datacard® Express™, Select™ and Magna™ Class families. Basic Edition also works with other card and paper printers for customers that do not require all the functionality and advanced features of these Datacard models.

The software is also compatible with selected Datacard integrated cameras, and any TWAIN-compatible or Video for Windows®-compatible image capture device.

Intuitive user interface

Basic Edition reduces learning and navigation to the simplest terms. An intuitive user interface and “point-and-click” simplicity make card design and production easy. Plus, easy-to-customize sample templates, online Help and a guided tour quickly turn new users into expert navigators.

Upgrade seamlessly as your needs change

As the foundation package in the ID Works software family, Basic Edition provides simple migration to other ID Works software—including any of the Standard or Enterprise packages. As your ID program expands, our advanced software packages offer more features, SDK support and a broad range of compatible databases, card printers and input devices.

Advanced security features

Start-up ID programs require the same airtight security as the larger, more advanced ones. That is why Basic Edition offers multi-level security—so you have absolute control over who designs cards and production forms and who has access to your databases. A full user audit trail also helps enhance security and accountability.
